Mr. Charles G. Ross, Presidential Secretary
The White House
Washington, D.C.

Dear Mr. Ross,

I am currently engaged in research for a graduate dissertation which will attempt to analyze the sociological and psychological implications of the flying saucer phenomenon.

In the light of the forceful radio commentary by Henry J. Taylor and the article which appeared in the "United States News and World Report", both of which declared or implied the saucers are aircraft of unusual design developed in the United States, I was interested to learn the reactions of Mr. Truman to the reports.

I understand that the Navy and the Air Force have issued qualified denials to the reports. Does the White House feel such reports are baseless?

I wish to thank you in advance for your interest and help. You may be assured that I will appreciate any information you may be able to give me.

Sincerely yours,

DeWayne B. Johnson

Letter to the President, dated 8-9-52

Flying Saucers. The writer relates a personal experience which happened in October, 1947, near Reno, Navada, at which time he saw a formation of shiny globular objects from which something, perhaps a parachutist, catapulted to the earth. He disapproves the theory of inter-terrestial bodies and advances his theory that the source of these objects is Eurasia and suggests that they are being used as a means of enemy infiltration. Whatever the source, the writer feels that as full a disclosure as possible should be made by official Washington since these saucers may present a serious military threat about which the American public deserves to know.
